

Handheld Contact for ACT! allows you to securely synchronize your phone and ACT! database using sophisticated syncing technology and quality plug-in software that is developed and maintained in-house for maximum functionality and reliability.

### Integrate with ACT!

Install our computer plug-in and configure it to integrate with an ACT! database. It is a central administration console for user management and intelligently keeps the ACT! database and all configured phones up-to-date.

### Managing users

Every user needs a Handheld Contact account so the administrator can manage them in the computer plug-in and customize their sync experience.

### Connecting the phone

Install our phone plug-in and sign in with the user's Handheld Contact account. The phone plug-in will communicate with the computer plug-in through the internet and automatically import settings and sync ACT! data.

### Internet security

Any information Handheld Contact transfers through the internet is encrypted with AES 128-bit SSL encryption to protect your data. Every user requires a Handheld Contact account to securely link a user's phone to the ACT! database.

### A quality experience

Our sync server, desktop computer plug-ins, and phone plug-ins are all developed and maintained in-house for maximum reliability and security.

### Sync service

Our patent-pending wireless syncing server technology is a secure, central intermediary between the computer plug-in and phone plug-in. All data, new or modified, passes through the sync service and ensures that any changes made to data are efficiently synchronized.

### Sync server

Our sync server is located in the United States in a secure, world-class facility with fire protection, climate control, 99.9% uptime, a redundant network connection, dedicated UPS, dedicated firewall with intrusion detection, and server performance monitoring.

### Synced data

Synced data is deleted from our sync server once the customer's phone and ACT! database are updated. This is done for security reasons.

### A simple hosted solution

Purchase a subscription for each user and that's it. Each subscription includes free software upgrades and unlimited data transfer through our sync server.
